JOB CHRONICLE #148

Date of Work: November 2012

Project: Transformer from Port of Houston to foundation

Location: Haskell, TX

Scope: HLI was tasked to move four shunt reactors, each weighing just a bit under 100,000lbs, from the Port of Houston, TX to their foundations located in Haskell, TX. HLI utilized four over the road, heavy haul tractor trailers to pick up and deliver these heavy units. Once they arrived by truck, a mobile truck crane was waiting at the site to offload each one and place them in the proper position on its permanent foundation. While the main bodies were being transported to the plant, 16 truckloads of accessories were being moved to the Haskell substation for each reactor's final assembly. HLI was responsible for providing all labor, equipment and supervision to complete the work including all permits and permissions.
