

# Job Chronicle: J-115252

**Location:** New Jersey

**Date of Work:** July, 2012

**Project:** B-2184 - Transformers from factory to foundation

HLI moved two nearly 150,000 lb transformers from the factory in Monterrey, MX to New Jersey. One transformer destined for Bayonne and the other for Metuchen. Each transformer began its journey from the factory on a rail car, moving all the way from Mexico to an offload point in Jersey City, NJ. Once they arrived at the rail spur, they were removed from the rail car by a crane and placed on over the road transport vehicles. Once at their respective substations, the transformers were removed from the trucks and placed on their awaiting concrete pads. HLI completed the project by megger testing each unit to make sure everything was functioning properly.
