

Job Chronicle: J-120072

Location: Tecumseh, KS

Date of Work: January 2013

Project: B-4790 - Transformer from factory to foundation

HLI railed this unit all the way up from Mexico to a rail siding in Tecumseh, KS. This nearly 205,000 lb transformer was a perfect choice to be shipped by rail. After arriving at the offload rail site, the transformer had to be offloaded from its heavy duty rail car to a small, easily maneuverable transporter for delivery to the substation. This was done by using the “jack and slide” operation. Once loaded to the transport trailer, it was just a short trip to the final destination inside the substation. After a safe arrival at the substation location, it was removed from the transporter using the jack and slide system again. This put the transformer onto the final pad ready for assembly and installation.
